

# Pléiades Glacier Observatory : DEM

**Date :** 2017-08-01  
**Site :** Lombardy\_CEU

## DEM information

### Coordinate system

UTM 32 north - EPSG 32632

### Correlation algorithm

Block Matching (BM)

### DEM resolution

2 m and 20 m

### Reference for height

Ellipsoidal Height (WGS84)

### Shift vector to Copernicus GLO-30 (m)

dx=-2.90; dy=+2.49; dz=+0.53

### Base-to-Height ratio (B/H)

0.38

## Description

DEMs and orthoimages were generated from raw Pléiades images using the Ames Stereo Pipeline [Beyer et al., 2018]. The set of processing parameters used for DEM generation are from [Marti et al., TC, 2016] for block matching -BM- and from [Deschamps-Berger et al., 2020] for semi global matching -SGM.

All DEMs and orthoimages are coregistered on the Copernicus GLO-30 DEM using the demcoreg tool [Shean et al., 2021].

Acknowledgement statement: The Pléiades images/DEMs used in this study was provided by the Pléiades Glacier Observatory initiative of the French Space Agency (CNES) and Laboratoire d'Etudes en Géophysique et Océanographie Spatiales (LEGOS).

When an image is shown in a presentation, website or an article, the copyright should be (Pléiades © CNES Year\_of\_acquisition, Distribution Airbus D&S).

We remind to cope with the licence rules regarding (no) data sharing and no commercial use.
